

### AMENDMENTS TO THE SPECIFICATION

#### **In the Specification:**

Please replace the paragraph beginning at line 24 of page 8 of the Detailed Description with the following paragraph:

To further optimize visualization of the clustered content, sub-filters 280 can be employed in connection with each respective cluster 210. As shown in Fig. 2, the clusters 210 can be operatively connected to or comprise a particular filter that has been trained *via* user preferences, for example. In one instance, content or messages as discussed herein can be organized within each cluster according to any one or more of the following types of user preferences: priority (*e.g.*, importance level), utility (*e.g.*, value or usefulness to the user), cost (*e.g.*, some value to the user), author (*e.g.*, originator's name or email address), genre (*e.g.*, type of content or message; subject matter of content), time criticality (*e.g.*, due date), age (*e.g.*, when received initially; when received into cluster), context (*e.g.*, subject matter), size (*e.g.*, of content or message), user state (*e.g.*, offline, online, active, inactive, away, etc.), account through which message was received (*e.g.*, work email account or personal email account), type of message (*e.g.*, email, instant message, document, etc.), and/or rendering device (*e.g.*, of content sender since physical limitations can be introduced based upon the device being employed by the content sender and/or user).
